SKILLS

Frontend

Angular, TypeScript, RxJS, Signals, HTML, SCSS

Backend

Node.js, Express, REST API, GraphQL

Mobile

NativeScript

Embedded

C++, Arduino, Raspberry Pi

Databases

SQL

Testing

Jest, Jasmine

Tools

Git, Docker, CI/CD, Linux, Jira

Practices

Design patterns, Clean Code, refactoring, code review

EDUCATION

2017 – 2022

Kielce University of Technology

BEng in Computer Science
Specialization: Information Systems

Laureate of the best diploma thesis competition

Thesis: "Smart home model based on the Raspberry Pi platform"

LANGUAGES

Polish – native

English – B1, working towards B2

INTERESTS

Mountains, sports and travel in every form – hitchhiking and road trips across Europe in my own small car. Home winemaking and game collecting.

Patryk Bilski

Software Developer

I have been building software for almost 6 years – from C++ systems for robots to web applications in Angular and Node.js for healthcare and industry. I work on both frontend and backend, and I am also developing my skills in application security and penetration testing. I value clean, scalable and maintainable code.

EXPERIENCE

03.2025 – present

Software Developer

WASKO S.A.

Modular frontend application (current, under NDA)

- Developing two independent functional modules in an application split into several standalone modules – as one of the three most experienced developers working on them.
- Maintaining and extending a shared library used by the other application modules.

System for a gas storage company

- Extended the Angular frontend application following the team's Scrum methodology.
- Contributed to the system through to project completion at the end of 2025.

Management system for hospitals and healthcare facilities

- Developed new features of the system.
- Optimized the application, significantly improving its performance.

Angular

TypeScript

RxJS

Signals

CI/CD

11.2022 – 02.2025

Frontend Developer

Gabos Software

MOSCATI – medical communication system for hospitals (EU-funded R&D project)

- Developed the frontend and backend of a system improving communication between medical staff, administration and patients on hospital wards.
- Built REST APIs in Node.js and Express and integrated them with the Angular frontend.
- Co-developed mobile apps for staff and patients in NativeScript.

Administration platform for Gabos products

- Developed, in Angular and GraphQL, a system for centrally managing multiple company applications from a single panel.

Angular

TypeScript

Node.js

Express

SQL

NativeScript

GraphQL

11.2020 – 08.2022

Embedded Software Developer

International Vision Machinery

Disinfection robot and dosimeters

- Co-developed C++ software for a disinfection robot.
- Took part in building Arduino-based dosimeters.
- Built a web application to control the robot and the dosimeters.

Production tracking system for Trend Glass

- Built web applications for tracking the production process at the plant.
- Developed the first version in vanilla JS and PHP, then rewrote it in Angular and Express.js.

C++

Arduino

JavaScript

PHP

Angular

Express.js
